Like to stock take on the move?

Consider a **Portable Data Terminal** and **Remote Software** to make stock taking breeze.

How does it work?

- ◆ A Portable Data Terminal (PDT) is a small, cordless, battery operated scanner that connects to your PC.
- ◆ You move around your shop scanning and counting stock.
- ◆ You return the scanner to a cradle and transfer the data to the Remote software.
- ◆ You check your stock take and the Remote software imports the stock take into Retail Manager.
- ◆ You commit the stock take in Retail Manager in the usual manner.

Very simple to use and a great time saver.

How do I get it?

We can supply hardware, software as well as complete the set up and train staff.

What does it cost?

As technology prices constantly change, ask us for a fixed price.

Improve your MYOB with our Classroom Training

MYOB in a Day - for those new to MYOB or wanting more confidence

MYOB Advanced - for those wanting to take their MYOB to a higher level.

Courses run monthly.
